DETAILED ACTION

1. Applicant's Remarks/Arguments has been received on July 27, 2006. Claim 1 has been amended.
2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action

Claim Rejections - 35 USC § 102

3. The rejections under 35 U.S.C 102(b), as anticipated by Randolph et al. (US Patent RE 37,765 E) on claims 1-5 are withdrawn because Applicant has amended claim 1.

Claim Rejections - 35 USC § 103

4. The rejections under 35 U.S.C 103(a), as unpatentable over Kovalev et al (US Patent 6,652,440) in view of Yamamoto et al. (US Publication 2001/0041282) on claims 1-5 are withdrawn.
5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Diebert et al. (US Patent 3, 442, 715) in view of Joshi et al. (US Patent 5,454,922).

Art Unit: 1745

In regard to claims 1, 2 and 5, the Diebert et al. reference discloses a fuel cell comprising electrode material made of carbon black (Column 1, Line 35), a platinum catalyst (Column 6, Lines 20), an organic liquid containing a dispersion medium with both high and low boiling point alcohols and water (Columns 3 and 4, Lines 70-75 and 1-20, 52-54). It is inherent that Since alcohols with boiling points of 100 to 200°C are disclosed by the Diebert et al. reference, the alcohols would inherently have intrinsic properties of a boiling point of 100 to 200°C and a solubility parameter of 7.5 to 13 (cal/mol)^{1/2} because the compound is the same as the recitation of the element in the specification. Though, the Diebert et al. reference discloses an ion exchange membrane it does not disclose an electrolyte used as part of the electrode paste. However, the Joshi et al. reference uses an electrolyte (Nafion) as a binder for the electrodes (Column 2, Lines 16-20). Therefore, it would be obvious to one of ordinary skill at the time the invention was made to incorporate Nafion as disclosed by Joshi et al. to the electrode paste as disclosed by Diebert et al. in order to improve the adhesion of the electrode to the ion-exchange membrane.

In regards to claim 3, the Diebert et al. reference also discloses dispersing agent (Column 4, Line 72) in the electrode paste.

In regards to claim 4, the Diebert et al. reference further discloses a fiber may be included of a conductive material such as carbon.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 1745

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
